

## *Keystone: Cemetery Manager*

The Keystone Cemetery Manager module helps you manage all aspects of the sale of interment rights and the recording of burials for as many cemeteries as required.

- Define all of the lots in each of your cemeteries using different descriptors for each cemetery if necessary
- Record detailed lot information such as lot type (standard or cremation), lot size, permitted monument type and GIS co-ordinates. You can even attach a photo of any monument already on the lot
- Record existing interment rights holders and issue new deeds for current interment right sales, linking with the cash receipts and general ledger modules for full financial integration
- Produce deeds for interment rights sales using your own custom form
- Record burials, linking to the lot and the deed
- One master table of people makes finding an individual, whether a rights holder an interred or both, quick and easy
- Search the lot table to find a specific lot and see at a glance who holds the interment rights and who is interred there
