

ACCOUNTS RECEIVABLE[™]

Tomorrow's Integrated Information System

asyst:Accounts Receivable is a feature-filled billing and collections product designed to interface seamlessly with **asyst:General Ledger** and **asyst:Cash Receipts**.

asyst:Accounts Receivable provides an integrated set of programs that not only allows you to bill many miscellaneous charges, but will also accept billings from other applications (or manually billed items) and provide the collection functions of a complete Accounts Receivable system.

Despite its ease of use and competitive pricing, **asyst:Accounts Receivable** is packed with features normally found in much more complex and expensive systems:

- Account for invoices already sent to customers or send original bills, all from the same data entry form.
- Provides search capabilities for invoices and payment transactions.
- Invoices can be re-printed and emailed.
- Handles billing for multiple departments as well as the accounting for revenue, accounts receivable and cash for multiple departments and funds.
- Permits cash receipts at time of sale or later as a result of billing.
- Works with **asyst:Cash Receipts** and interfaces directly with **asyst:General Ledger**, but works independently of these two products as well.
- Multiple reports and inquiries available.
- Provides the ability to assess finance charges and to accommodate variable sales taxation on products and services.

asyst:Accounts Receivable can also be interfaced with **asyst:Code Enforcements**, **asyst:Business Licenses**, **asyst:Animal Licenses** and **asyst:Cemetery Management** for simplified billing.
