

ANIMAL LICENSING™

Tomorrow's Integrated Information Systems

The Keystone Animal Licensing module will assist you in licensing any animal and locating the animal's owner should they go missing.

- Facilitate animal control by quickly searching for a license to determine the animal owner.
- Renew licenses with the push of a button.
- Renew all licenses on January 1st and invoice animal owners for the new tags issued or renew licenses individually as the owners request – it's up to you.
- Define fee schedules and maintain animal breed, veterinarian, and owner databases as well as detailed animal information.
- This module interfaces directly with the Accounts Receivable, Cash Receipting and General Ledger modules.
- Process license fee payments in batches, print receipts, and post transactions to the general ledger.
- Track who has paid for their animal license and who has not, levy finance charges and issue reminder notices.
- The database includes animal name, breed, gender, reproductive status, age, veterinarian, vaccination number and expiry date, owner name, address and phone and special notes. Enter as much or as little information as you need.
- The alert system included in the module provides you with the ability to flag animals to alert the user of special notes regarding the animal (or owner).
