

E-BILLING AND E-PAYMENT™

Tomorrow's Integrated Information Systems

The eBilling and ePay for PayPal services work together; however, eBilling service can be implemented without the ePay for PayPal service. ePay for PayPal can be implemented without eBilling.

eBilling

- Provides both convenience for the bill recipient and dramatic cost savings for the biller.
- Allows bill recipients to view their utility bill and tax bills at a secure web server with an account number and a PIN.
- All eBill recipients that have an email address will automatically be sent an email notification that a new eBill has arrived.
- eBills can be printed and stored physically by the recipient or can be downloaded as a PDF file and stored digitally on the recipient's computer.
- eBills store 12 bills for utility billing and unlimited tax bills on the secure server.

ePayment for PayPal

- Permits your customer to make credit card / debit card payments to pay Utility Bills, Tax Bills, as well as any AR invoice for such applications as Animal License, Building Permits, and Business Licenses. In addition, other miscellaneous payments can be accepted on your website.
- Based on the Customer Pays model for paying credit card processing fees, that is, the customer who avails themselves of the convenience of being able to use a credit card pays for the convenience.

This software permits you to download, on your schedule, all payments received over your website and to automatically post this batch of payments into the appropriate Keystone module. Your organization receives 100% of the amount due on the customer's bill. No manual entry of payments!
