

METER MANAGEMENT[™]

Tomorrow's Integrated Information System

asyst:Meter Management allows you to maintain a complete database of purchased, installed and in stock meters. It interfaces seamlessly with **asyst:Utility Billing** to provide easy lookup of meters from the meter database and linkage of those meters with associated services at a location. It provides a complete meter history as well as meter testing results. **asyst:Meter Management** allows your organization to:

- Maintain Meter Information such as ID, Status, Service Type, Meter Type, Manufacturer, Model and more.
- Maintain Meter History of the accounts and service locations at which this meter has been installed over its life.
- Tracks and monitors an unlimited number of Meter Tests.
- System provides a list of meter repairs over a user-specified time period and prints in repair date order.
- You can easily provide a list of meters based on a user-defined selection criteria.
- Meter Management simplifies the difficult task of performing ongoing meter maintenance.
- Integrates with **asyst:Service Orders** to track all service requests performed on meters and maintains the history of the service performed on each meter.
- Tracks over 40 user defined fields for meters.
- Easily look up all of the locations where a meter has been installed.
- Look up meter by meter number, account number, location, parcel ID, serial number, manufacturer, model and many more options!

asyst:Meter Management is part of a comprehensive system of **asyst:Utility Billing** applications that can be mixed and matched to meet the needs of your organization. The **asyst** family operates in either a single user or a networked PC environment.

Despite its ease of use and value pricing, **asyst:Meter Management** is packed with features that will make your work life easier, more productive and more efficient.
